

CREATIVE COMMONS

in the Classroom

Students Can License Their Work

Examples of how students can use Creative Commons

Tobias, a 14 year old pupil at a school in Toronto, is interested in birds. He records different birdsongs and posts them as mp3 files on his blog. He chooses a Creative Commons license giving others permission to reuse his sound files.

Jesse, a 12 year old pupil at a school in Winnipeg, is doing an assignment on North American birds. She writes her own texts, takes photos and publishes her schoolwork on the net. However, Jesse needs to find some sound files of real birdsongs. She finds Tobias' work and adds a couple of files to her assignment. She also chooses a Creative Commons license giving others permission to reuse her photos.

Hanako, a pupil at a school in Vancouver, is doing a project on foreign mammals and birds. She finds Jesse's work and uses some of the photos in her own project. Hanako chooses then to publish her texts using a license that allows others to reuse them for non-commercial purposes.

In this way all three pupils benefit from Creative Commons and do not run the risk of breaking copyright legislation when using each other's material.

What is Creative Commons ?

All texts, photos, films and sound recordings, basically everything you create, are owned by you as author. This ownership makes it possible for you to decide how your work may be distributed and used.

The copyright law gives the author full ownership of his/her work. That's why anyone wishing to use your work must ask you, the author, for permission to use it. Many authors want their work to be distributed as widely as possible and therefore wish to give others the right to use their work. This is where Creative Commons comes into the picture.

Creative Commons is a non-profit organization that provides copyright licenses that can be used by anyone with material that they have created. The licenses are free to use anywhere in the world. By using a Creative Commons license you are able to state clearly that you give permission for others to use your work and under which conditions. The license states clearly which rights and limitations apply when using your work. In this way people can easily see how you wish your work to be used and they do not need to ask for your permission to use it.

Creative Commons – 4 Conditions

Creative Commons comprises six different licenses. By combining four conditions in six different ways you obtain the different types of license. Each condition has its own symbol:

Attribution

You must acknowledge the author, the name of the work, and the license that applies for the work.

No derivative works

You let others copy, distribute, display, and perform only verbatim copies of your work, not derivative works based upon it.

Non-commercial

You let others copy, distribute, display, and perform your work - and derivative works based upon it - but for non-commercial purposes only.

Share alike

You allow others to distribute derivative works only under a license identical to the license that governs your work.

There are six Creative Commons licenses - Here's what they allow you to do

Creative Commons licenses permit you as author to retain your copyright. If anyone breaks the licensing conditions copyright law will apply.

All six Creative Commons licenses permit the following:

- making copies of the work
- distributing the work
- showing or presenting the work in public
- digital webcasting of the work
- conversion of the work to another format

From this foundation there are a number of restrictions and opportunities in the following six licenses:

Attribution

- author, name of work and license must be included
- the work may be used for commercial purposes
- the work may be altered, remixed or added to

Attribution - Share alike

- author, name of work and license must be included
- the work may be used for commercial purposes
- the work may be altered, remixed or added to as long as the new work has the same license as the original

Attribution - No derivatives

- author, name of work and license must be included
- may be used for commercial purposes
- the work may not be altered in any way

Attribution - Non-commercial

- author, name of work and license must be included
- the work may not be used for commercial purposes
- the work may be altered, remixed or added to

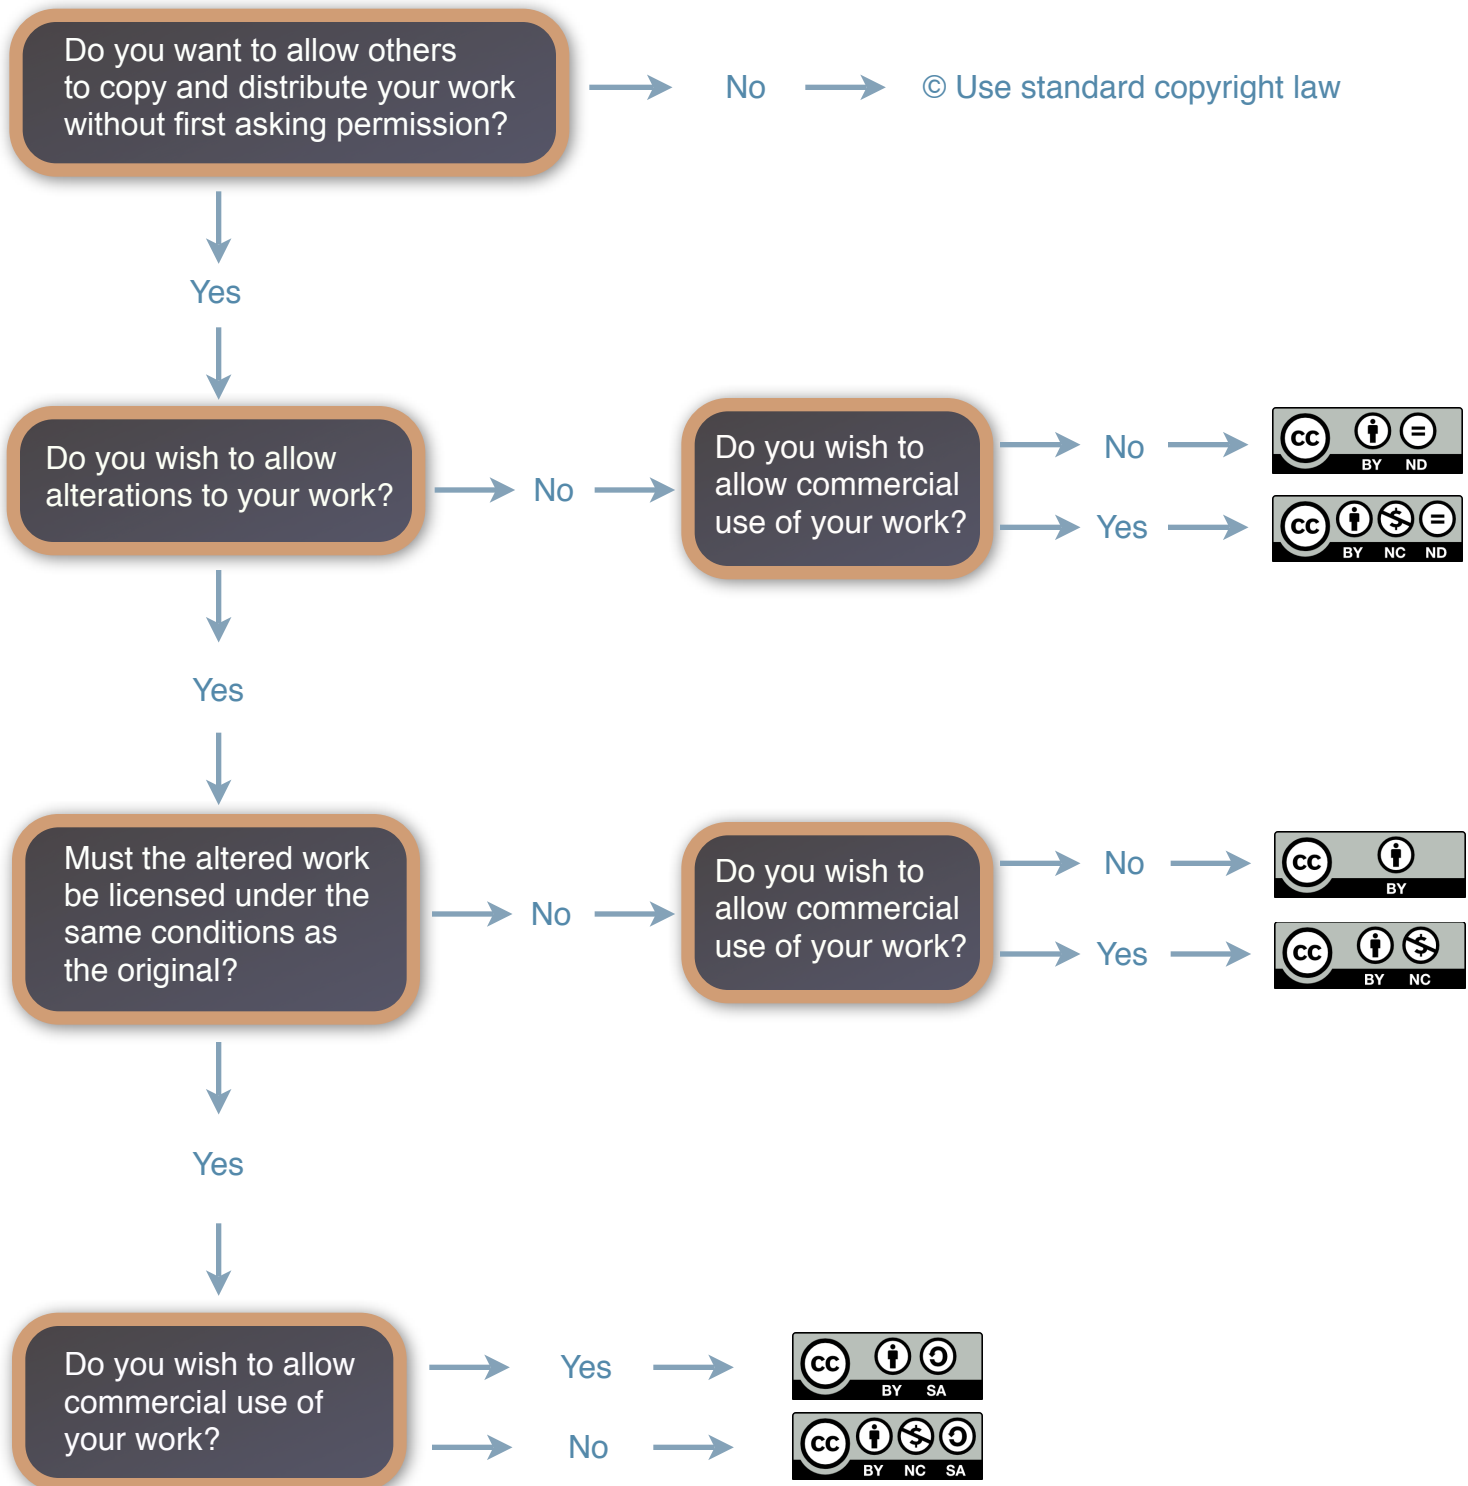

Attribution - Non-commercial - Share alike

- author, name of work and license must always be given
- the work may not be used for commercial purposes
- the work may be altered, remixed or added to as long as the new work has the same license as the original

Attribution - Non-commercial - No derivatives

- author, name of work and license must always be given
- the work may not be used for commercial purposes
- the work may not be altered in any way

Digital material that you create and of which you have full copyright ownership can be licensed under Creative Commons.

The license is completely free of charge.

You can license your texts, photos, audio files, videos, your blog, a whole website or anything else you have created. If you have interviewed or photographed someone else it is recommended that you ask their permission before you put a Creative Commons license on the work. This is particularly important if you choose a license that permits commercial use. If there are several people responsible for the work you should all agree on whether or not to license and if so which type of license you wish to use.

It is recommended that you show the license clearly on your work. You can get help with creating your license at this address:
<http://creativecommons.org/choose/>

Please note that you may only license material for which you have full rights. If you only wish to license certain texts, photos, films or other content, on for example your blog or website, you should clearly state this beside your license.

The license is placed on or close to the work you wish to license. Here's an example of the license for a school website where the photo archive containing the school's own photos is licensed under a Creative Commons license:

© The Findlay District School

The school's photo archive is licensed under a Creative Commons Attribution-Non-commercial-Share alike 2.5 Canadian license.

In licensing your content, you can also include additional instructions. For example:

For usage attribute content to:

"The Findlay District School" and link to

<http://findlaydsb.on.ca> and to our license:

<http://creativecommons.org/licenses/by-nc-sa/2.5/ca/>

Copyright for this Document
